FOREWORD

The pioneering work in the field of drug utilization has firstly been done by two consultants at the WHO Regional Office for Europe, Engel and Siderius (The consumption of drugs: report of a study 1966-1967. WHO regional Office for Europe, 1968). A series of studies on drug utilization in European countries which were supported by WHO have resulted in the establishment of DRUG UTILIZATION RESEARCH GROUP (DURG). The target of this group was to develop internationally applicable methods for drug utilization research. Norwegian researchers have improved a system called the **Anatomical Therapeutic Chemical (ATC) classification** which was based on the previous system known as the European Pharmaceutical Market Research Association (EphMRA) classification system [1]. Thus, the basic part of this “**Pharmacy Practice Manual**” covers drug knowledge based on the **ATC Classification**. This guideline was developed to measure the output of the student learning in pharmacy practice. The aim of the manual is to help increase students knowledge on drug utilization in all perspectives including pharmacy management.

The main and subgroups of drugs according to the **ATC Classification** are given below. These drug groups are given to remind the students their knowledge gained in the lectures of pharmaceutical sciences during the study. With the help of this classification, each student should complete the manual personally with their own hand-writing. One or two examples for each drug group should be given in the forms provided in this manual to be filled with respect to trade name of the drug, the chemical name of the active compound(s), the chemical class of the active compound, the origin of the active compound (synthetic, natural, biological or biotechnological), Indications (uses), pharmaceutical dosage forms, route of administration, prescription requirement, doses, treatment time, uses during pregnancy, contraindications, Drug – Drug interactions and patient profile (age, gender). In the pages of “Magisterial Prescription” two examples should be given.

In addition to drug knowledge, there are some pages to be filled under the titles of PHARMACY MANAGEMENT. These are Accounting, Auxiliary Tools used in Pharmacy, Pharmacist and patients Relations – Patient Follow-Up, Shelf Life of the Drug, Pharmacy and Drug Stores Relations: Stock Control – Drug order. The knowledge on these subjects provided by the preceptors should be enriched based on your observations during the pharmacy practice. Finally, appropriate examples should be given for the Ordinary, Red, Green, Purple and Orange prescriptions.

You can also write your additional personal observations and suggestions in the separated pages during the pharmacy practice which can be helpful and valuable for us in the preparation of the future guidelines.

We wish all of you a fruitful pharmacy practice studies.
